

UDP-glycosyltransferase
 UDP-glucosyltransferase
 transporter
 transferase activity, transferring hexosyl
 transferase activity, transferring glycosyl
 sequence-specific DNA
 scopolin beta-glucosidase
 RNA polymerase II proximal promoter sequence-specific DNA
 quercetin 7-O-glucosyltransferase
 quercetin 3-O-glucosyltransferase
 peroxidase
 oxygen
 on paired donors, with incorporation or reduction of molecular oxygen, NAD(P)H as one donor, and incorporation of one atom of
 oxidoreductase
 NADP
 monooxygenase
 methyltransferase
 iron ion
 hydrolase activity, hydrolyzing O-glycosyl com
 heme
 glutathione transferase
 glutathione
 flavonol 3-O-glucosyltransferase
 flavin adenine dinucleotide
 ferredoxin-NADP+ reductase
 FAD
 drug transmembrane transporter
 DNA-binding transcription activator activity, RNA polymerase II-
 dioxygenase
 copper ion
 beta-glucosidase
 ATPase activity, coupled to transmembrane movement of sub
 ATPase
 ADP
