

Suppression of flg22-mediated RGI is a dominant community trait

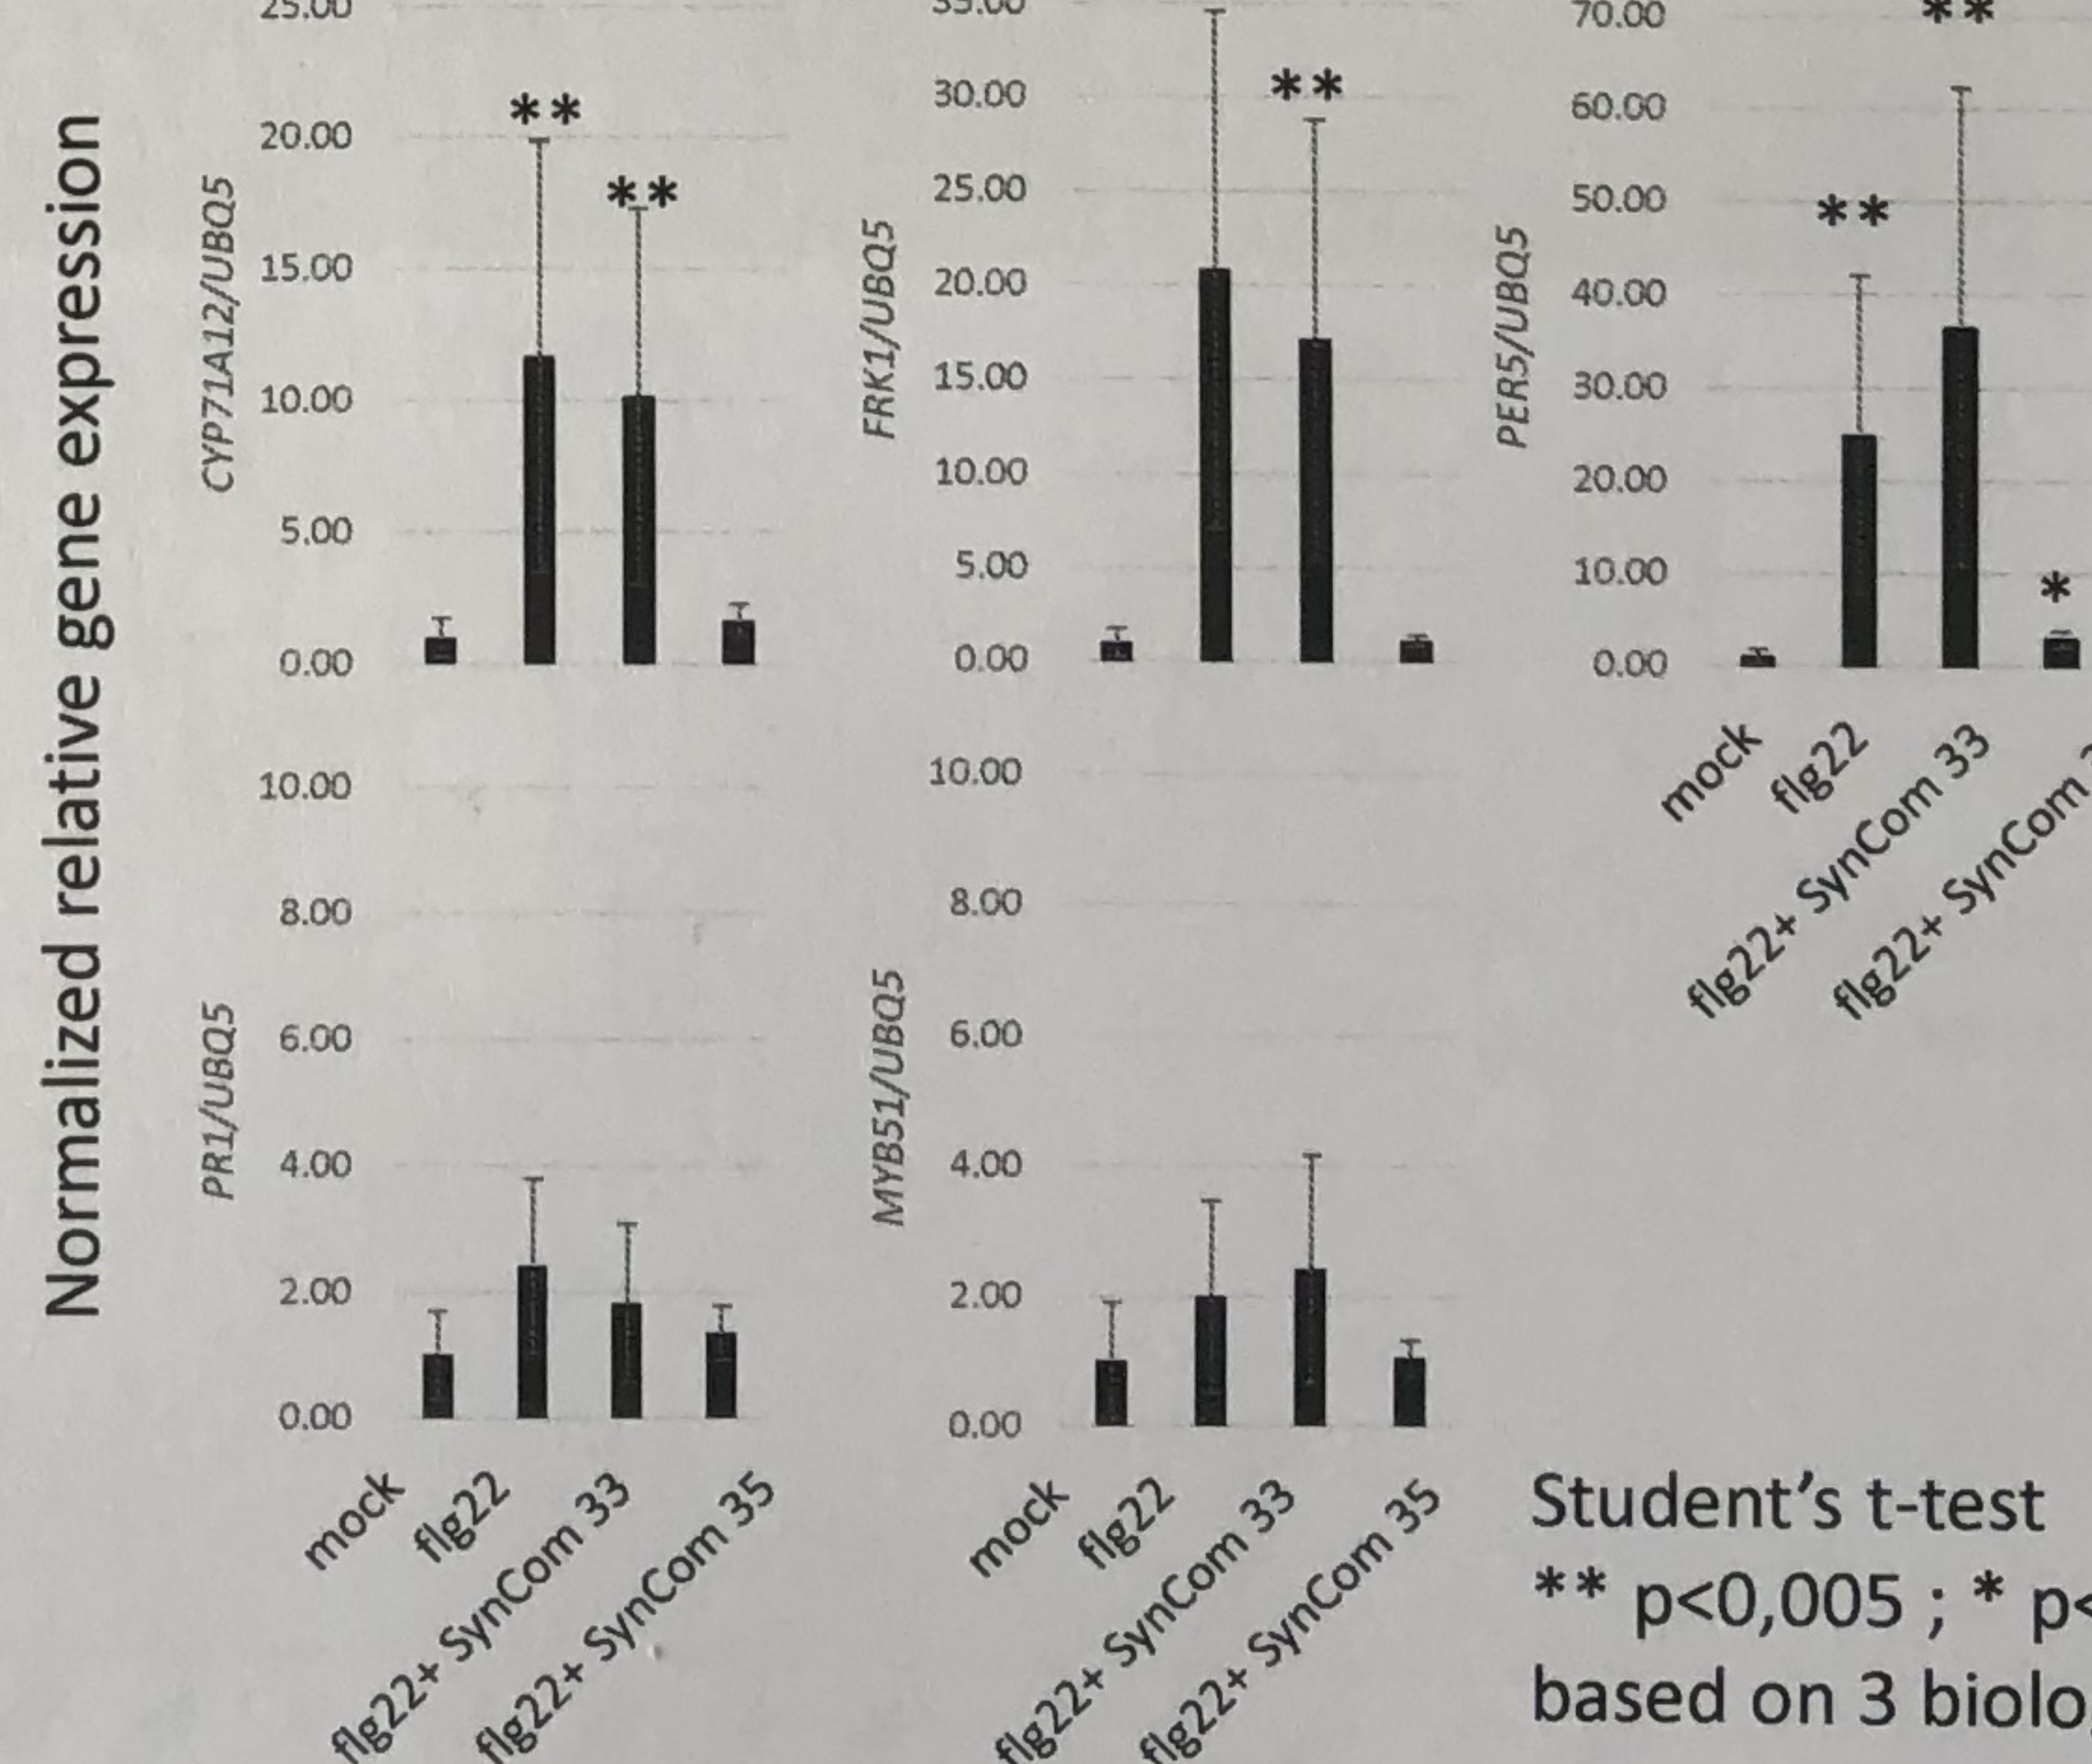

3 biological replicates, Dunnett's test

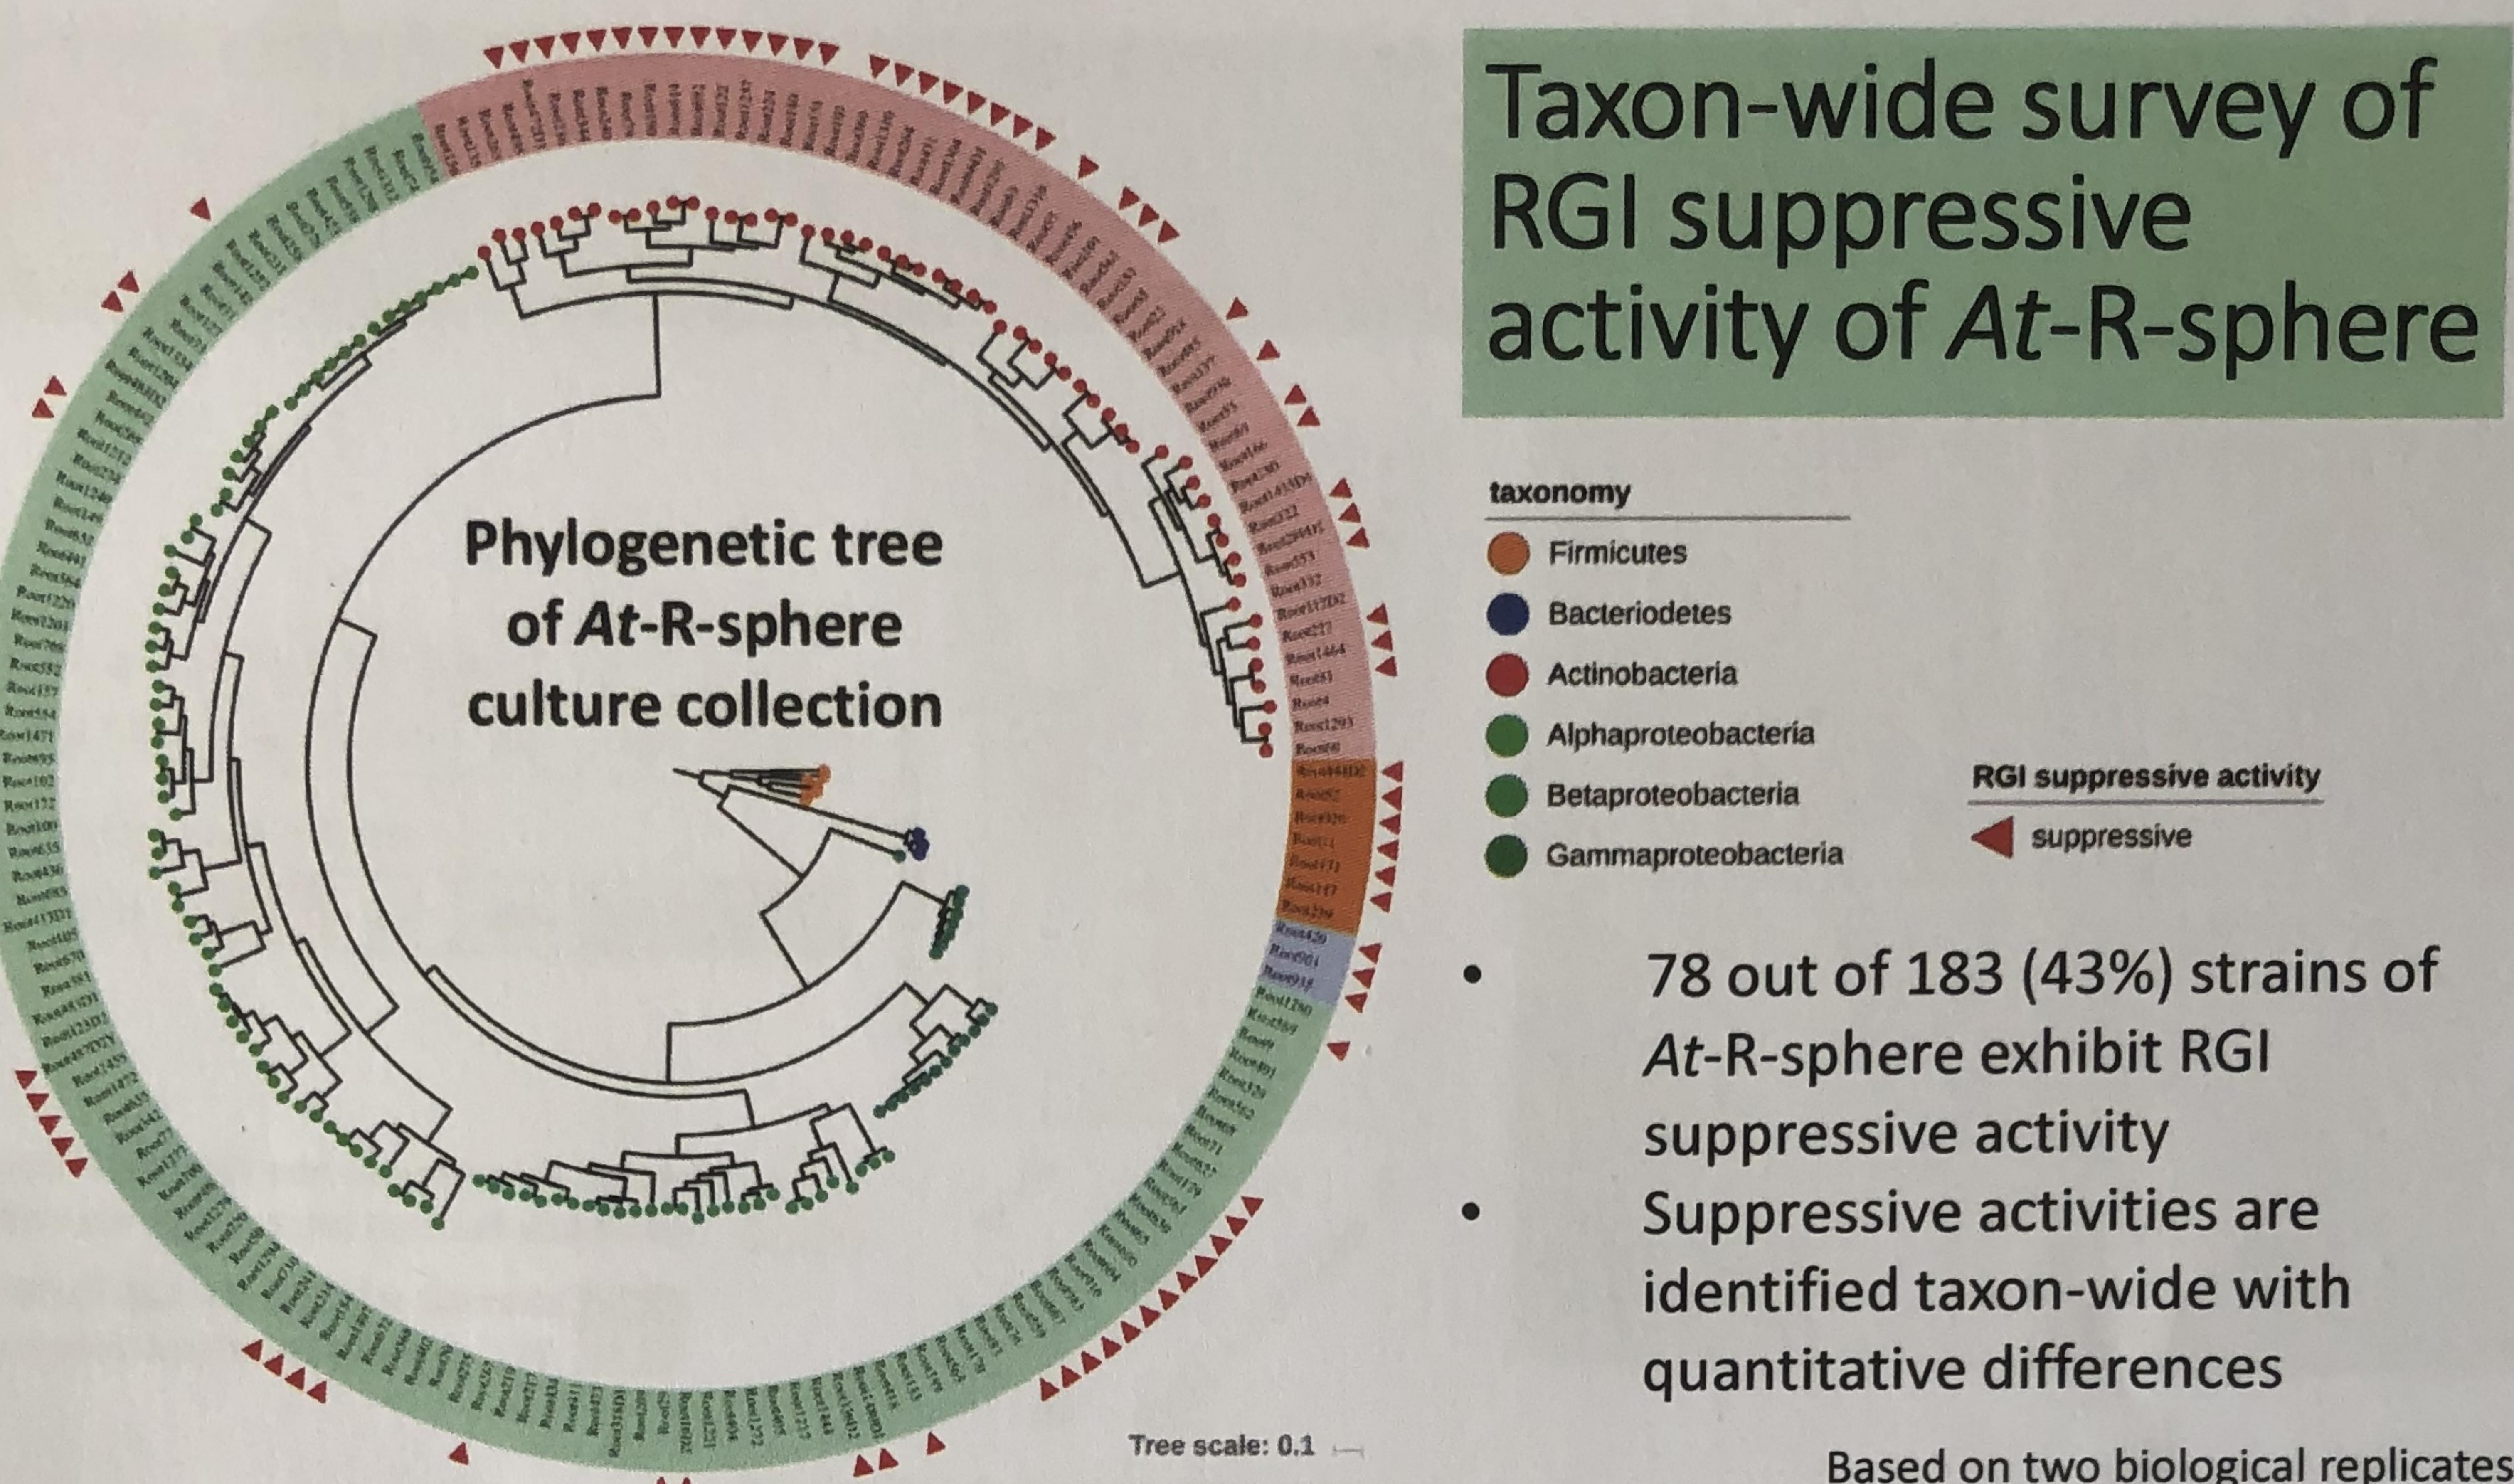

Flg22-induced defense genes are downregulated by RGI-suppressive SynCom

Col-0 roots, 2 weeks post inoculation with both flg22 and SynCom

Student's t-test
** p<0,005 ; * p<0,05
based on 3 biological replicates

Microbiota members derepress RGI mediated by the endogenous DAMP Atpep1
